## Why Full Open Access Matters

**Michael W. Carroll\***  
American University, Washington, D.C., United States of America

Scientific authors who pay to publish their articles in an open-access publication should be congratulated for doing so. They also should be aware that they may not be getting full open access from some publications that charge for publication under the "open access" label. Two features define an open-access publication: (1) the published contents are freely accessible through the Internet, and (2) readers are given copyright permission (see Box 1) to republish or reuse the content as they like so long as the author and publisher receive proper attribution [1]. Recently, some publications have begun offering an open-access option that charges for Internet publication without granting readers full reuse rights, such as Springer's Open Choice or Nature's Scientific Reports. These publishers have adopted a business model through which authors pay for immediate publication on the Internet but the publisher nonetheless keeps commercial reuse rights for itself. This is not full open access (see Box 2).

Getting open access right matters because the new publishing model is designed to increase the pace and impact of scientific communication through the power of the Internet. Immediate, free publication increases the audience for scientific research and overcomes the increasingly high price barrier to access imposed by the traditional, is to shift from a model that uses copyright to control reuse of content to one that uses copyright to encourage republication, preservation, and translation.

### Why Support the Open-Access Financial Model?

Pricing of traditional, subscription-financed scientific journals is highly inefficient. The growth in digital technologies and in digital networks should be driving down the price of access to the scholarly journal literature, but instead prices have increased at a rate greatly in excess of inflation (e.g., [4,5]). Moreover, studies from journal publishing in some disciplines show that commercial journal publishers successfully charge significantly more than non-commercial journal publishers, such as scholarly societies, even when the commercial offerings make less valuable contributions to the progress of science and knowledge as measured by citations (e.g., [6]).

The economic roots of the pricing problem are not difficult to discern. Journal publishers provide a platform between authors of journal articles and their readers. In these situations, the go-between can choose a mix of prices to each side of the relationship, usually charging more to the party that is more dependent on the go-between. The traditional demand is relatively inelastic for two reasons. First, libraries are mission-driven to acquire as broad a swath of the literature as they can afford to serve their patrons effectively. Second, subscriptions for academic journals within a given field are not readily interchangeable, unlike, say, subscriptions to news magazines, because each academic journal publishes unique research. Having their subscribers over a barrel, commercial publishers have steadily consolidated to reduce their costs while increasing profits through uncompetitive pricing [7].

The open-access model fundamentally shifts the balance of power in journal publishing, and thereby greatly enhances the efficiency and efficacy of scientific communication. In its most common form, the model shifts the costs of publication entirely to the author-funder side of the relationship so as to broaden access as far as the Internet reaches and to remove the need for any lingering usage barriers. By shifting the costs of publication entirely to the author-funder side, journals must compete head-to-head on quality and price without diminishing impact through price or usage barriers because authors have greater choice over where to publish than libraries have over whether to subscribe. This increased competition will reduce the overall costs

Short communication

## A game for smokers: A preliminary naturalistic trial in a psychiatric hospital

<sup>a</sup>Division of Substance Abuse, University Hospitals of Geneva, Switzerland

Received 5 June 2007; received in revised form 4 October 2007; accepted 8 October 2007

**Abstract**

**Objective:** "Pick-Klop" is a game based on cognitive behavioral therapy. It aims to change smokers' attitudes towards tobacco addiction. This study tests the feasibility and the impact of one brief session of the intervention in a naturalistic setting within a psychiatric hospital.

**Method:** Fifty-one smokers were recruited during their stay in a psychiatric hospital with a prohibitive smoking policy. They were assessed pre- and post-treatment with visual analogue scales designed to evaluate their intention to stop smoking.

**Results:** All patients completed the intervention. The outcome shows that the intention to stop smoking becomes significantly stronger after the intervention.

**Conclusion:** This pilot study supports the feasibility and the effectiveness of the "Pick-Klop" game in a psychiatric hospital setting. The game seems to improve the intention to quit smoking. The data, however, should be confirmed by a controlled trial. Moreover, follow-up studies are needed to examine the potential impact of the game on smoking cessation attempts.

**Practical implications:** The game seems to be a useful and simple tool for education about smoking in a psychiatric hospital setting.

### 1. Introduction

Smoking is the first avoidable cause of morbidity and mortality [1]. Most smoking cessation attempts are made without any help [2].

Despite the efficacy of nicotine substitutes [3], bupropion [4] and some behavioral approaches [5], these treatments are used only by a minority of smokers [6,7]. This is probably due to the

sufficient to induce behavioral changes [9]. Positive attitudes towards giving up nicotine addiction, however, are linked to a greater willingness to stop smoking [10].

In the transtheoretical model of behavioral change, a re-evaluation of the advantages and disadvantages of nicotine addiction and cessation enable smokers to evolve within the motivational process [11].

The notion of "self-efficacy" [12] corresponds to the trust

The screenshot shows the Mendeley Desktop application window. The title bar reads 'Mendeley Desktop'. The interface is divided into several sections:

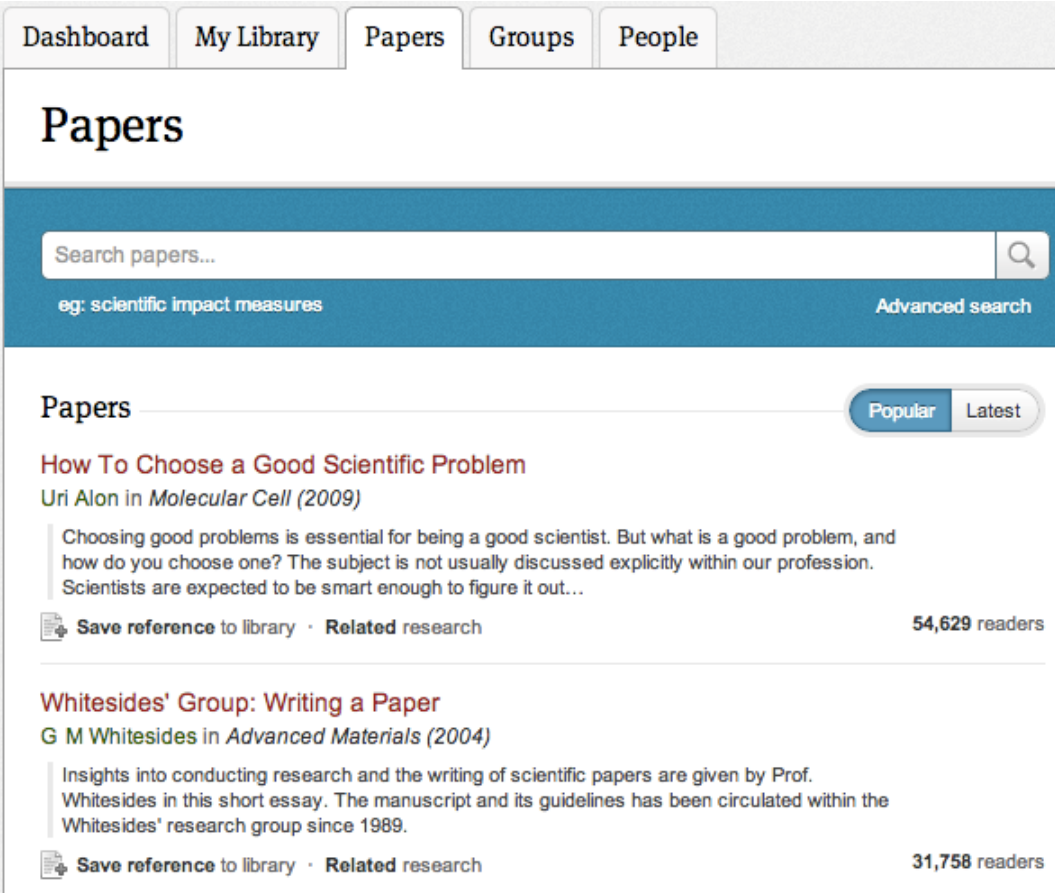

- Left sidebar:** Contains 'MENDELEY' (Literature Search, Mendeley Suggest), 'MY LIBRARY' (All Documents, Recently Added, Favorites, Needs Review, My Publications, Unsorted, The Lancet, Create Folder...), and 'GROUPS' (Create Group...). A 'Filter by Authors' dropdown is set to 'All', listing authors like Andrews, J.G., Aycock, Mary, Bailey, Charles W., Benson, Philippa J., Björk, Bo Christer, Brody, Tim, Carr, Les, Carroll, Michael W., Chandrasekhar, V., Collins, Maria, Cryer, Emma, and Evans, James A.
- Search bar:** Contains the text 'Open Access'.
- Search Results:** A list of search results with checkboxes and download icons. The selected result is 'Why full open access matters' by Michael W. Carroll (2011, PLoS Biology).
- Details panel:** Shows tabs for 'Details', 'Notes', 'Contents', and 'Enrichments'. A message states 'This document is not in your library' with a 'Save PDF' button. The document type is 'Generic'. The title is 'Why full open access matters' by M. Carroll. It includes a 'View research catalog entry for this paper' button, the year '2011', and an abstract: 'This perspective explains the mechanics of copyright and scholarly publishing and warns authors who support open-access publishing about a new pseudo open-access publishing model in which authors pay but publishers still retain commercial reuse rights.' There are also sections for 'Tags', 'Author Keywords', and 'City'.

# Vyhľadávanie online

The screenshot shows the Mendeley Papers search interface. At the top, there are navigation tabs: Dashboard, My Library, Papers (selected), Groups, and People. Below the tabs is a search bar with the placeholder text "Search papers..." and a search icon. Below the search bar, there is a suggestion: "eg: scientific impact measures" and a link to "Advanced search". Below the search bar, there are two buttons: "Popular" (selected) and "Latest". Below the buttons, there are two search results. The first result is titled "How To Choose a Good Scientific Problem" by Uri Alon in *Molecular Cell* (2009). The abstract reads: "Choosing good problems is essential for being a good scientist. But what is a good problem, and how do you choose one? The subject is not usually discussed explicitly within our profession. Scientists are expected to be smart enough to figure it out...". Below the abstract, there are two icons: a document icon and a related research icon. To the right of the icons, it says "54,629 readers". The second result is titled "Whitesides' Group: Writing a Paper" by G M Whitesides in *Advanced Materials* (2004). The abstract reads: "Insights into conducting research and the writing of scientific papers are given by Prof. Whitesides in this short essay. The manuscript and its guidelines has been circulated within the Whitesides' research group since 1989." Below the abstract, there are two icons: a document icon and a related research icon. To the right of the icons, it says "31,758 readers".

**Mendeley Year in Review 2013**

This was a year of great change at Mendeley, with lots of news, exciting developments and, of course, tons of fun at Mendeley HQ. Here are a few of the many highlights:

In January, the Mendeley founders Jan, Paul, and Victor were voted "Best Startup Founders" at the Europas, considered the Oscars of the European Tech scene. This was the second win for Mendeley, which scooped up the prize for "Best Social Innovation Which Benefits Society" in 2009.

In February, we listened to your comments and released Mendeley Desktop v1.8, with expanded offerings and bug fixes.

April brought a lot of attention as Mendeley joined Elsevier. We're proud to have honoured our promise that the merger would mean very little change for our users, beyond some positive resources...like the doubling of storage space that immediately followed the announcement.
